

AI-Powered Lead Generation, Business Audit & Personalized Outreach System

Main Goal

Build an automated AI system that can find local businesses from platforms like Google Maps and Yelp, analyze their online presence, identify business growth opportunities and pain points, then generate highly personalized outreach emails based on those findings.

The purpose of the system is to replace the manual prospecting process normally performed by sales representatives, marketers, SEO agencies, web development agencies, and AI automation agencies.

Current Manual Process

A human normally performs the following steps:

1. Search a niche and city on Google Maps or Yelp.
2. Open each business profile.
3. Visit the business website.
4. Analyze website quality and identify issues.
5. Check Google Business Profile quality.
6. Visit Instagram profile.
7. Review posting frequency, engagement, and profile optimization.
8. Visit Facebook page.
9. Review activity and branding consistency.
10. Find business email address.
11. Identify the most important pain points.
12. Write a personalized outreach email referencing those pain points.
13. Send the email and follow up.

The goal is to automate as much of this workflow as possible.

System Architecture

Phase 1: Lead Discovery

Input:

- Niche
- City

Examples:

- Real Estate Agencies in Sydney
- General Contractors in Melbourne
- Construction Companies in Brisbane
- Luxury Car Rental Companies in Perth

Process:

- Search Google Maps
- Search Yelp
- Collect business information

Output:

- Business Name
 - Website URL
 - Phone Number
 - Address
 - Rating
 - Reviews
 - Google Business Profile URL
-

Phase 2: Website Data Collection

Process:

- Visit business website
- Crawl homepage
- Crawl contact page
- Crawl about page
- Crawl team page
- Crawl footer and header links

Extract:

- Email addresses
- Contact forms
- Social media links
- Website content

Output:

- Verified business email(s)
 - Website data
-

Phase 3: Website Audit Agent

Analyze:

- Mobile responsiveness
- Website speed
- SSL security
- Call-to-action presence
- Lead capture forms
- Design quality
- Navigation quality
- SEO basics
- Trust signals

Output:

- Website score
 - Website issues
 - Improvement recommendations
-

Phase 4: Social Media Audit Agent

Analyze:

Instagram

- Last post date
- Posting frequency
- Bio optimization
- Website link
- Content consistency

Facebook

- Activity level
- Branding consistency
- Review management
- Posting frequency

Output:

- Social media score
 - Social media issues
 - Improvement recommendations
-

Phase 5: Google Business Profile Audit Agent

Analyze:

- Review count
- Review response rate
- Rating quality
- Profile completeness
- Business information consistency

Output:

- GBP score
 - GBP issues
 - Improvement recommendations
-

Phase 6: Pain Point Analysis Agent

Combine findings from:

- Website Audit
- Social Media Audit
- GBP Audit

Identify:

- Top business weaknesses
- Missed opportunities
- Lead generation problems
- Marketing problems

Output:

- Top 3–5 business pain points
 - Prioritized recommendations
-

Phase 7: Personalized Outreach Agent

Using:

- Business name
- Website findings
- Social media findings
- GBP findings
- Pain points

Generate:

- Personalized cold email
- Personalized first line
- Personalized follow-up sequence

Output:

- Ready-to-send outreach emails
-

Phase 8: Outreach Automation

Process:

- Send email
- Track opens
- Track replies
- Send follow-ups
- Update CRM

Output:

- Automated outreach pipeline
-

Final Vision

The final product should function as an AI SDR (Sales Development Representative) or AI Business Growth Agent.

Given only a niche and city, the system should:

1. Find businesses.
2. Collect contact information.
3. Audit their online presence.
4. Detect business pain points.
5. Generate personalized outreach.
6. Send emails automatically.
7. Track responses and follow-ups.

The system should be modular so new audit agents, lead sources, and outreach channels can be added later without rebuilding the core data collection engine.
